## Yokohama Rubber announces renewal of its floating and fixed fender global website — More extensive product information —

Tokyo — The Yokohama Rubber Co., Ltd., announces that a new, revised global website introducing its floating and fixed fenders (<https://www.y-yokohama.com/global/product/mb/fenders/>), is online from today, April 27.

In addition to a new webpage design, the renewal site provides more extensive information about YOKOHAMA fenders, including its products for special applications, like the ABF-P (Air Block Fenders with Protector Panel) fender for use on docking terminals and its ultra-large fenders. The renewal website is designed to help customers to understand the performance and functionality of the fenders, with examples of actual usage, performance curve data\* for each size of the ABF-P lineup, and a movie introducing the key features of YOKOHAMA's ultra-large fenders.

\* Data showing the relations between deflection & reaction force and deflection & energy absorption

Yokohama Rubber developed the world's first floating fender in 1958. Since then, more than 40,000 YOKOHAMA fenders have been used around the world. The website renewal is intended to provide a wider range of customers with more information about the superior performance and high-quality of YOKOHAMA fenders with actual usage examples. The website is also part of Yokohama Rubber's efforts, as the leading manufacturer of fenders, to contribute to improving the safety of cargo handling in the oceans.

Yokohama Rubber is currently implementing its Yokohama Transformation 2023 (YX2023) medium-term management plan for fiscal years 2021–2023. The plan calls for the MB Segment to concentrate its resources in its two strongest business domains — hose & couplings and industrial products — as it aims to become a growth driver capable of generating stable profits. As part of that plan, Yokohama Rubber is endeavoring to strengthen the product and brand power of its marine products lineup by strengthening its production network and maintaining their high market shares.
